Quick Refresher

**Data analytics is about
what two things?**

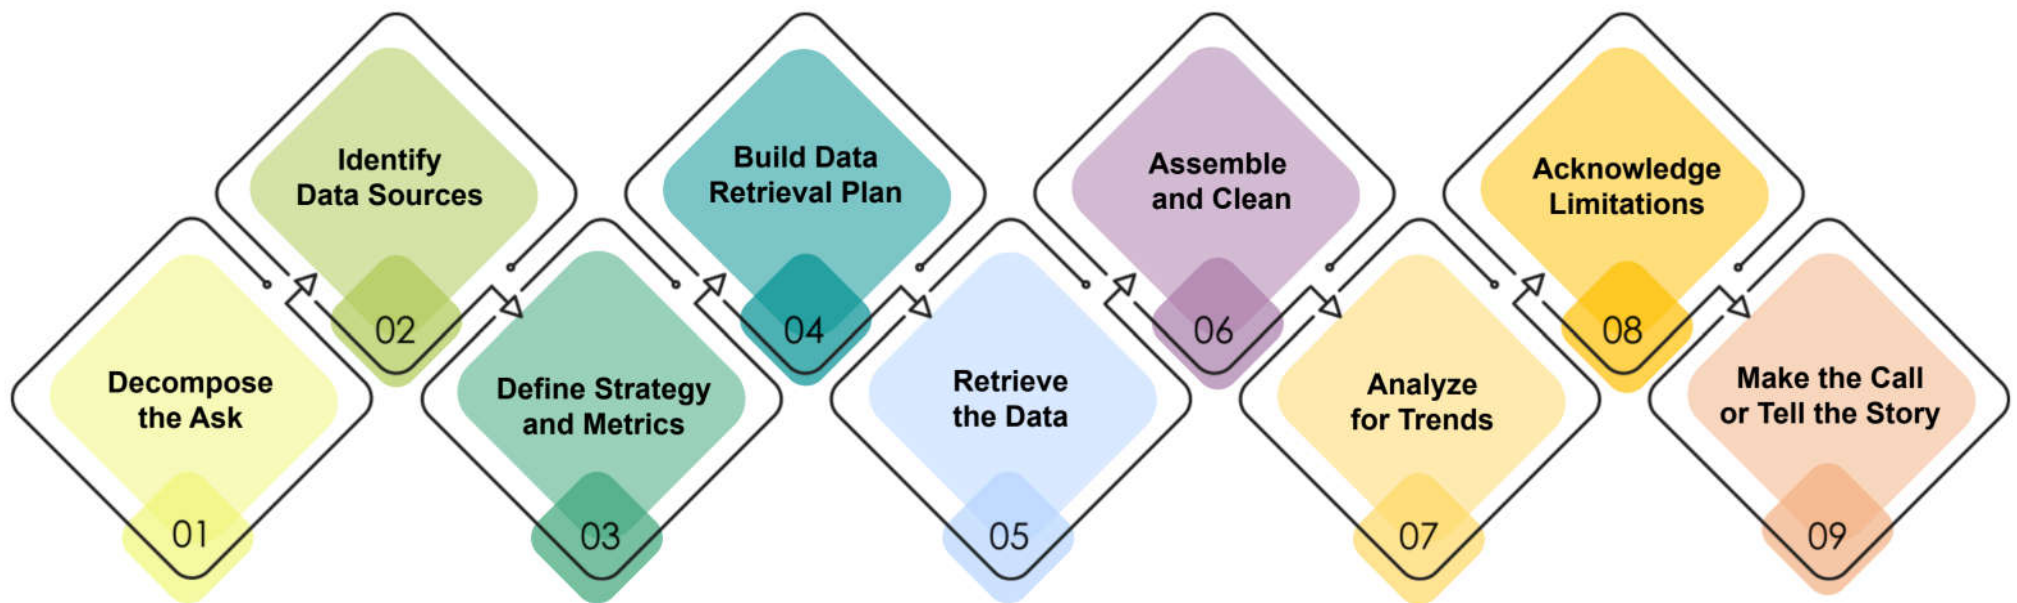

Fundamentally, data analytics
is about **storytelling** and
truth-telling.

**What are the steps in the
analytics paradigm?**

Analytics Paradigm

This paradigm provides a general and repeatable pathway for effective data problem-solving.

Let's Start with the Basics

Instructor Demonstration

Excel Playground

Excited to get started?!

Formulas

Ooh...Coding! (Sort Of)

Excel has introduced you to a sort of proto-programming. When you write scripts, you will rely on **functions** (methods) that work on or with **arguments**.

Function

Arguments

Function

Ooh...Coding! (Sort Of)

When we reference a range or a set of ranges, Excel is given a set of **variable** inputs. Excel will determine the actual values of these inputs prior to executing the function.

=

AVG(

F4:F6

)

Function

Variable Arguments

Function

Ooh...Coding! (Sort Of)

What about this example?

Which is the **function**?

Which are the **arguments**?

```
= SUM( AVG(F4:F6), AVG(G4:G6) )
```

Ooh...Coding! (Sort Of)

What about this example?
Which is the **function**?
Which are the **arguments**?

The **AVG functions** take the provided ranges as their arguments.

```
= SUM(  AVG(F4:F6),  AVG(G4:G6)  )
```

Ooh...Coding! (Sort Of)

What about this example?
Which is the **function**?
Which are the **arguments**?

This is a **nested function**.
We'll be doing plenty
of complex nests in
this class.

```
= SUM( AVG(F4:F6),  AVG(G4:G6) )
```

You Can Code Too!

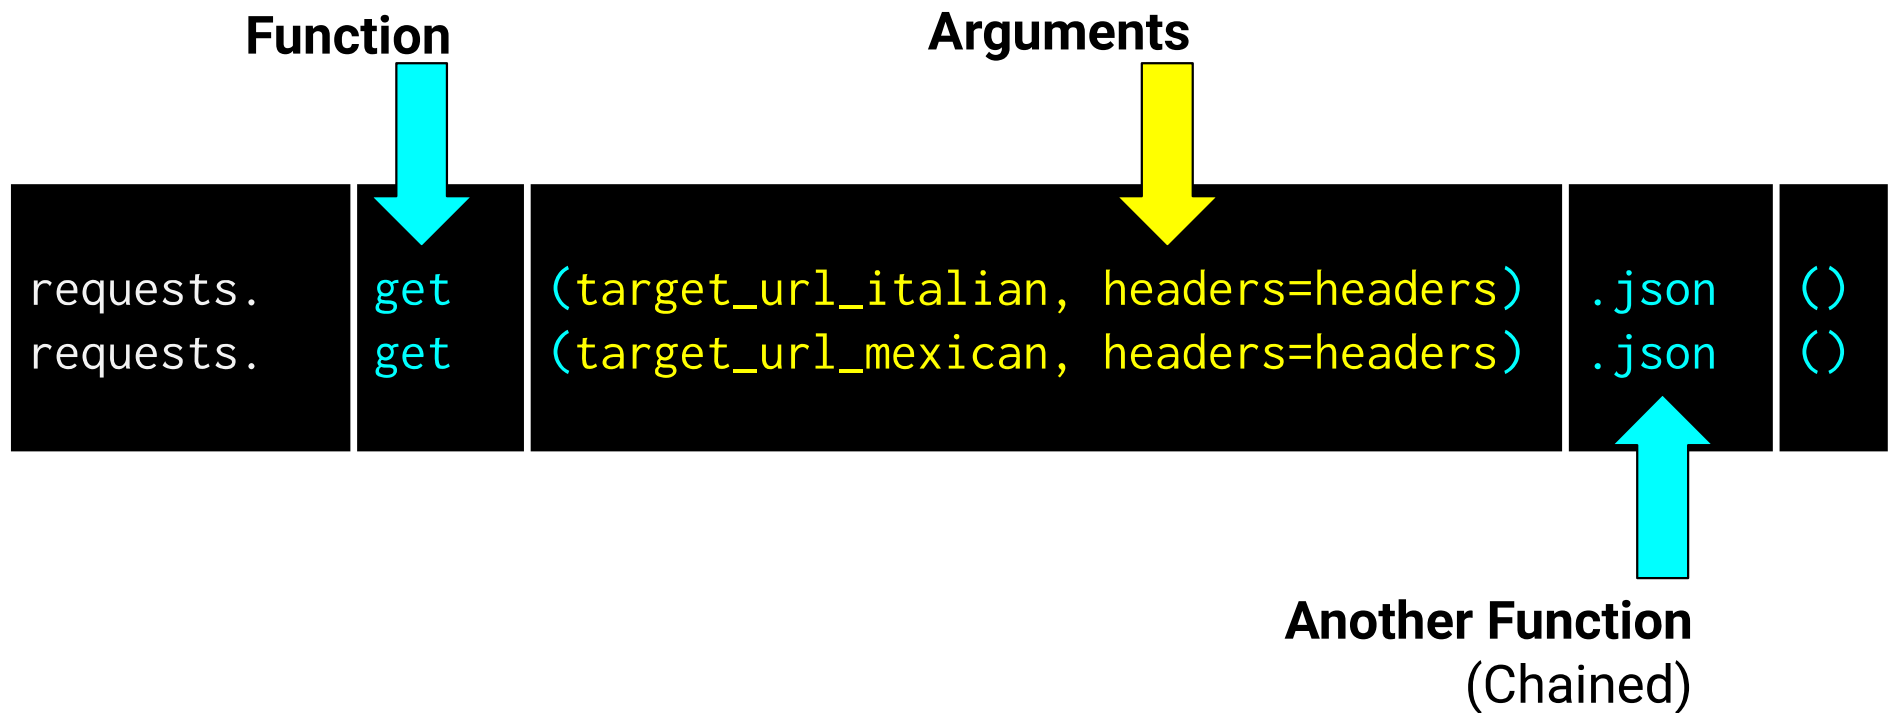

Here's a Python snippet from the previous class.

```
requests.get(target_url_italian, headers=headers).json()  
requests.get(target_url_mexican, headers=headers).json()
```

You Can Code Too!

Syntax and capabilities may differ across technologies and platforms, but fundamental concepts remain the same.

Time to <code>

Excel Playground

Instructor Demonstration

Named Ranges

There are multiple ways to select data in a formula

Most of us learned to select a range of cells to input in a function.

```
=AVG(A1:A10)
```

There are multiple ways to select data in a formula

But we can also name a range of values to make interpreting formulas easier!

`=AVG(A1:A10)`

`=AVG(prices)`

Time to <code>

Excel Playground

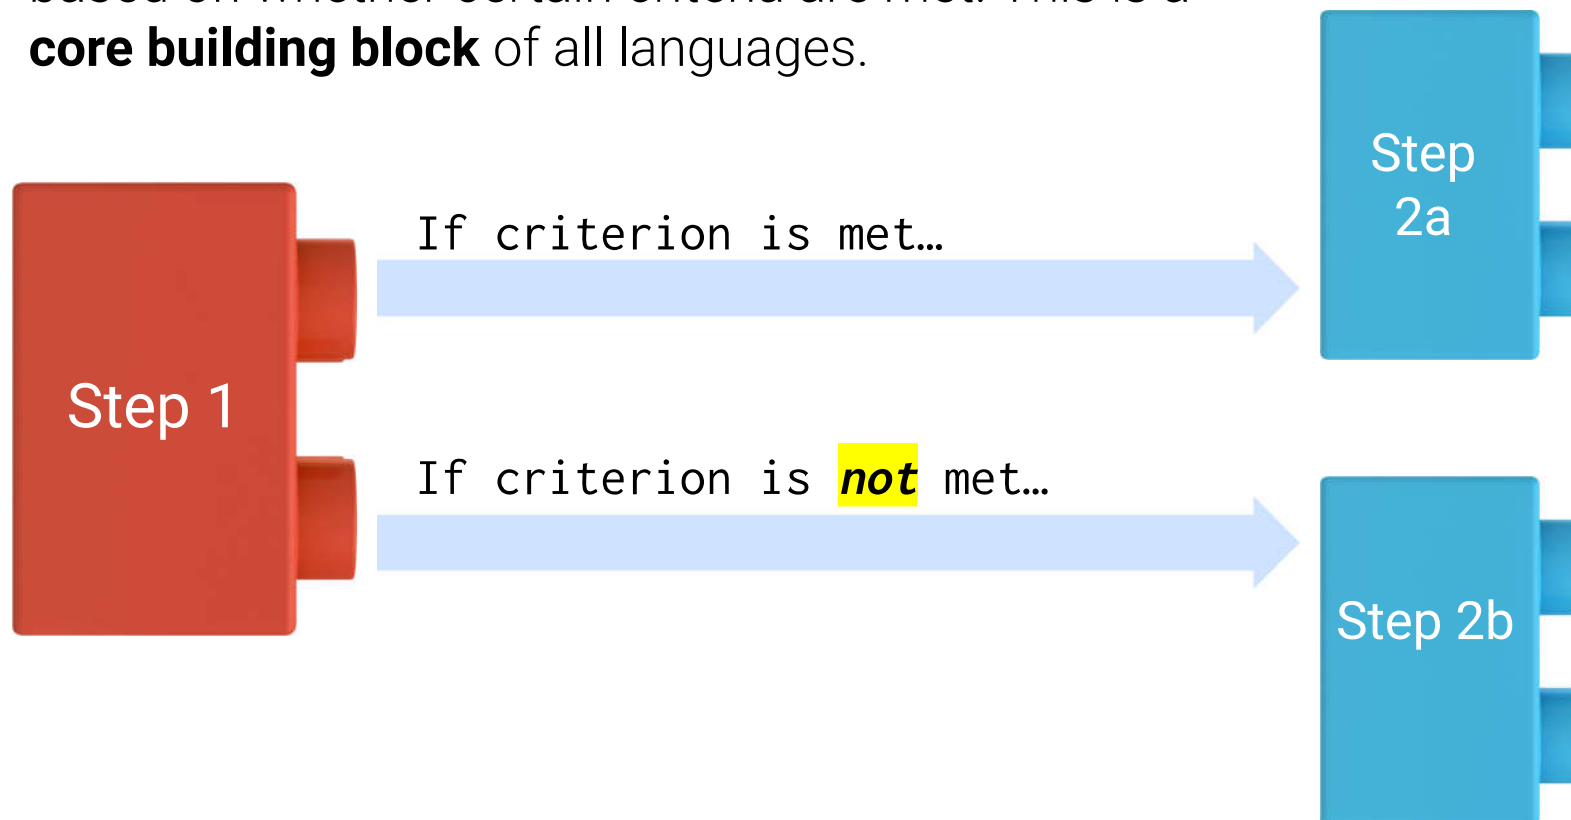

Instructor Demonstration

Color Counter

Conditionals: If This, Then That

Conditionals give us a way to control the flow of logic based on whether certain criteria are met. This is a **core building block** of all languages.

Conditionals: If This, Then That

=IF(D2>5, TRUE, FALSE)

**But what if we want to
combine conditions?**

AND, NOT, OR

Ooh...Coding! (Sort Of)

But what if we want
to **combine** conditions?

AND, NOT, OR

```
=IF(AND(D2>5, D2<10),TRUE,FALSE)
```

Conditionals: If This, Then That

Nested conditionals are powerful but can become convoluted very quickly!

Excel Playground

Activity: Grade Book

Create a formula that calculates the final grade for a student based on their previous exams and papers.

Suggested Time:

15 minutes

Activity: Grade Book

To do

- Create a formula that calculates the final grade for a student based up their previous exams and papers.

When making this calculation

- Consider every paper and exam to be equal in weight; each should comprise one-fourth of the overall grade.
- Round the result to the nearest integer.
- Using conditionals, create a formula that returns **PASS** if a student's final grade is greater than or equal to 60. If a student's final grade is below 60, the formula should return **FAIL**.

Bonus

- Greater than or equal to 90 = A
- Greater than or equal to 80 and less than 90 = B
- Greater than or equal to 70 and less than 80 = C
- Greater than or equal to 60 and less than 70 = D
- Anything less than 60 = F

Time's Up! Let's Review.

Instructor Demonstration

Measures of Central Tendency

What are “measures of central tendency”?

Values used to describe
the center of a data set

Central Tendency

Three most common measures of central tendency:

Mean

The “arithmetic” average

To calculate: The sum of all values, divided by the number of values

Median

The middle value of a data set

To calculate: Sort the data set and find the center

XXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXX

Correction: This column should be labeled as "Mode"

Mode

The most frequent value of a data set

To calculate: Count the frequency of each value in a data set, determine the most frequent value

Time to <code>

Break

Instructor Demonstration

Formatting

Formatting in Excel falls into two categories

01

Data Formatting

- Changes the way a value is represented in a cell.
- Used to help with interpretation or to add context to the range of values
- Examples:
 - Date and Time
 - Currency
 - Percentage
 - Scientific Notation

02

Style Formatting

- Changes the way the cell and text are viewed
- Can include font color, cell highlighting, borders, etc.
- Can be performed manually or using formulas/logic (conditional formatting)

<Time for Excel>

Instructor Demonstration

Pivot Tables

Getting pivot with it

Pivot tables are one of the most important data visualization concepts to master in this class. (Don't worry. They are a very user-friendly.)

The screenshot displays an Excel spreadsheet with a PivotTable summarizing revenue and reservations by month and room type. The PivotTable is structured with 'Row Labels' (Month), 'Column Labels' (Room Type), and 'Values' (Sum of Revenue). The data is organized by year (2014 and 2015) and month (January to December). The 'Insert Calculated Field' dialog box is open, showing the formula for 'AverageRevenue' as $\text{Revenue} / \text{Reservations}$. The dialog box also lists the fields available for calculation: Year, Quarter, Month, RoomType, Revenue, and Reservations.

Row Labels	Column Labels	Cambridge	Piccadilly	Grand Total
2014		\$ 1,111,886	\$ 1,214,733	\$ 2,326,619
January		\$ 90,005	\$ 94,910	\$ 184,915
February		\$ 104,397	\$ 133,914	\$ 238,311
March		\$ 53,546	\$ 80,115	\$ 133,661
April		\$ 103,543	\$ 98,960	\$ 202,503
May		\$ 111,353	\$ 93,664	\$ 205,017
June		\$ 94,292	\$ 98,108	\$ 192,400
July		\$ 112,334	\$ 73,953	\$ 186,287
August		\$ 68,446	\$ 76,590	\$ 145,036
September		\$ 82,581	\$ 152,078	\$ 234,659
October		\$ 103,366	\$ 78,984	\$ 182,350
November		\$ 82,564	\$ 134,740	\$ 217,304
December		\$ 105,459	\$ 98,717	\$ 204,176
2015		\$ 1,286,966	\$ 1,523,054	\$ 2,810,020
January		\$ 134,521	\$ 96,206	\$ 230,727
February		\$ 85,955	\$ 140,144	\$ 226,099
March		\$ 129,781	\$ 151,357	\$ 281,138

Getting pivot with it

Basically, a pivot table is a **summative** analytic tool that allows us to perform aggregate functions that allow any combination of fields. (The term *pivot table* comes from the fact that we are pivoting along a data axis).

Seller	Qty. Sold	Date
Joseph	\$42.50	1/1/17
Jacob	\$65.00	1/3/17
Jacob	\$5.25	1/6/17
Joseph	\$125.00	1/6/17
Jacob	\$3.50	1/7/17
Matt	\$32.00	1/9/17

Seller	Total Sold
Joseph	\$167.50
Jacob	\$73.75
Matt	\$32.00

Word to the wise: Keep it flat!

Modern Business Intelligence (BI) tools like Tableau, Sisense, and Salesforce work best if data is stored in flat CSVs—meaning column headers represent fields (vertically) on the spreadsheet. This is largely because all of these technologies heavily utilize pivot tables as a tool for their visualizations. **Don't try to confuse this simplicity. "Spreadsheet magic" is a nightmare to analyze.**

<Time for Excel>

Activity: Top-Songs Pivot Table

In this activity, you will use a 5000 row spreadsheet containing data for the top 5000 songs from 1901 onward. Using pivot tables, you will uncover which artists have the most songs in the top 5000, the song titles, and the year each song was released.

Suggested Time:
17 minutes

Top-Songs Pivot Table Instructions

- Select all of the data in your worksheet, and create a new pivot table.
- Make a pivot table that can be filtered by year and contains two rows: *Artist* and *Name*.
- All of an artist's songs should be listed below their name.
- Update your pivot table to contain values for:
 - How many songs an artist has in the top 5000
 - The sum of the `final_score` of their songs.
- Sort your pivot table by descending sum of the `final_score`.

Time's Up! Let's Review.

Instructor Demonstration

Lookups

Look it up with Lookups

Assume this table is gigantic. How would we **retrieve** the population of a specific planet for use in another formula?

Planet	Population
Zeelo	5020
Merinoa	380
Cardboard Box	2
...	...
Asteroid 9	95

Look it up with Lookups

Assume this table is gigantic. How would we **retrieve** the population of a specific planet for use in another formula?

`=vlookup(<value>, <full table>,
<column to retrieve>,<match parameter>)`

Planet	Population
Zeelo	5020
Merinoa	380
Cardboard Box	2
...	...
Asteroid 9	95

Look it up with Lookups

What will this yield?

`=vlookup("Asteroid 9", Planets, 3, FALSE)`

Planet	Population	Species
Zeelo	5020	Zoltans
Merinoa	380	Murphies
Cardboard Box	2	Hambones
...	...	
Asteroid 9	95	Asterisks

Look it up with Lookups

What will this yield?

`=vlookup("Asteroid 9", Planets, 3, FALSE)`

Planet	Population	Species
Zeelo	5020	Zoltans
Merinoa	380	Murphies
Cardboard Box	2	Hambones
...	...	
Asteroid 9	95	Asterisks

Asterisks

<Time for Excel>

Partner Activity: Product Pivot

A small company selling electronics and electronic media has asked our class to create a table that visualizes the cost of their recent orders. Using lookups, create a pivot table that serves this purpose.

Suggested Time:
15 minutes

Activity: Product Pivot

- Determine the "Product Price" of each row in the "Orders" sheet by using a `VLOOKUP()` that references each row's "Product ID"
 - The "Product Price" of a row does not include shipping
- Determine the "Shipping Price" of each row in the "Orders" sheet by using a `VLOOKUP()` that references each row's "Shipping Priority"
- Select all of the data on the "Orders" sheet, and create a new pivot table that calculates the sum of "Product Price" and "Shipping Price" for each "Order Number" and "Product ID"

Suggested Time: 15 minutes

Time's Up! Let's Review.

Questions?

FIST TO FIVE:

Who feels comfortable
with pivot tables in Excel?

FIST TO FIVE:

Who feels comfortable
with the measures of central tendency?
